Subject: Advanced Java (01CT1623)	**Aim:** Build upon Tasks 1 & 2 to enhance the Library Management System with JSP pages.	
Take Home Exam 3	**Date :-22-04-2026**	**Enrollment No:-** 92301733024

AuthenticationFilter.java

```
package filter;

import javax.servlet.*;
import javax.servlet.http.*;
import javax.servlet.annotation.*;
import java.io.IOException;

//@WebFilter({"/addBook.jsp", "/viewBooks", "/addBook"})
public class AuthenticationFilter implements Filter {

    public void doFilter(ServletRequest request, ServletResponse response, FilterChain chain)
            throws IOException, ServletException {

        HttpServletRequest req = (HttpServletRequest) request;
        HttpServletResponse res = (HttpServletResponse) response;

        HttpSession session = req.getSession(false);

        if (session == null || session.getAttribute("user") == null) {
            res.sendRedirect("login.jsp");
            return;
        }

        chain.doFilter(request, response);
    }
}
```

BookBean.java:

```
package model;

public class BookBean {

    private int bookId;
    private String title;
    private String author;
    private int quantity;

    public BookBean() {}

    public int getBookId() { return bookId; }
    public void setBookId(int bookId) { this.bookId = bookId; }
```

```
    public String getTitle() { return title; }
    public void setTitle(String title) { this.title = title; }

    public String getAuthor() { return author; }
    public void setAuthor(String author) { this.author = author; }

    public int getQuantity() { return quantity; }
    public void setQuantity(int quantity) { this.quantity = quantity; }
}
```

Demonstration of Session, Filters, JSTL, and JavaBeans

Session: Maintain user login state across multiple requests.

Filter: Intercept requests and restrict access to protected resources.

JavaBeans: Transfer data between Servlet and JSP in structured form.

JSTL (JSP Standard Tag Library): Display dynamic data in JSP without Java code.

Complete Flow

1. User logs in → Session created
2. Filter checks session before allowing access
3. Servlet processes request
4. DAO fetches data from database
5. Data converted into JavaBeans
6. Beans sent to JSP using request.setAttribute()
7. JSP displays data using JSTL (<c:forEach>)
8. Response sent back to browser
